FAQ " projets recherche connect.fr "

- **Should I add my email addresses when I create my projets recherche connect.fr account?**
  We recommend adding all the email addresses you use to access partner applications right from the start, so you can switch seamlessly between different applications.
  - Warning:
    A generic email address should not be added to the email list of a person who has a personal account. This could pose a risk to your personal data if other people have access to that same generic email address.

- **I see my assumed last name but not my birth name?**
  If the assumed last name is provided, the platform will display that name on the dashboard and in the top-right corner of your profile. Otherwise, it will display your birth name.

- **Logging in with ORCID and the forget password option for your projets recherche connect.fr account**
  You can reset your password on **projets recherche connect.fr**, but please note that the new password will not be the same as your ORCID password. If you want to log in with ORCID, you'll need to reset your password on ORCID.

- **Change your password item in the projets recherche connect.fr account**
  If you logged in using an ORCID account, please note that changing your password will only affect the log in using your email address and password. To change your ORCID password, you will need to go to the ORCID platform.

- **I logged in with ORCID, but I don't see my other secondary email addresses on projets recherche connect.fr account**
  You'll need to make sure you've allowed access to trusted apps for those email addresses (red, orange, and green logo icons).

- **I deleted an email address pulled from ORCID from my projets recherche connect.fr account, but it keeps reappearing every time I log in via ORCID**
  If the email address you want to delete is listed in your ORCID account, you'll need to delete it from your ORCID account. Otherwise, it will appear among your **projets recherche connect.fr** email addresses. **projets recherche connect.fr** only retrieves emails with access rights to trusted applications and does not manage ORCID emails.
